## Part I  Three Physics Visions

1  **Notes on “Quantum Gravity” and Noncommutative Geometry**  
J.M. Gracia-Bondía  

1.1  Introduction  

1.2  Gravity and Experiment: Expect the Unexpected  
   1.2.1  Noncommutative Geometry I  
   1.2.2  Whereto Diffeomorphism Invariance?  

1.3  Gravity from Gauge Invariance in Field Theory  
   1.3.1  Preliminary Remarks  
   1.3.2  Exempi Gratiae  
   1.3.3  The Free Lagrangian  
   1.3.4  A Canonical Setting  
   1.3.5  What to Expect  
   1.3.6  Causal Gauge Invariance by Brute Force  
   1.3.7  CGI at All Orders: Going for It  
   1.3.8  Details on Quantization and Graviton Helicities  
   1.3.9  Final Remarks  
   1.3.10  Other Ways  

1.4  The Unimodular Theories  

1.5  The Noncommutative Connection  
   1.5.1  Prolegomena  
   1.5.2  Ironies of History  
   1.5.3  Spectral Triples  
   1.5.4  On the Reconstruction Theorem  
   1.5.5  The Noncommutative Torus  
   1.5.6  The Noncompact Case  
   1.5.7  Nc Toric Manifolds (Compact and Noncompact)  
   1.5.8  Closing Points  
   1.5.9  Some Interfaces with Quantum Gravity  

1.6  More on the “Cosmological Constant Problem” and the Astroparticle Interface

4.5.5  General Structure of Heat Kernel Coefficients ............... 234
4.6  High-Energy Approximation ........................................ 236
4.7  Low-Energy Approximation ........................................... 238
4.7.1  Algebraic Approach ............................................. 239
4.7.2  Covariantly Constant Background in Flat Space .............. 241
4.7.3  Homogeneous Bundles over Symmetric Spaces ............... 245
4.8  Low-Energy Effective Action in Quantum General Relativity .. 255
References ................................................................. 258

5  Lectures on Cohomology, T-Duality, and Generalized Geometry . 261
P. Bouwknegt
5.1  Cohomology and Differential Characters .............................. 261
5.1.1  A Brief Review of de Rham and Čech Cohomology ............. 262
5.1.2  Electromagnetism ................................................. 264
5.1.3  The Čech – de Rham Complex .................................... 267
5.1.4  Differential Cohomologies ........................................... 270
5.2  T-Duality ............................................................... 276
5.2.1  Introduction to T-Duality ........................................... 276
5.2.2  The Buscher Rules ................................................. 277
5.2.3  Gysin Sequences and Dimensional Reduction ..................... 282
5.2.4  T-Duality = Takai Duality ......................................... 285
5.2.5  T-Duality as a Duality of Loop Group Bundles ............ 287
5.3  Generalized Geometry .................................................. 290
5.3.1  Cartan Relations ...................................................... 291
5.3.2  Lie Algebroids ....................................................... 292
5.3.3  Generalized Geometry ................................................. 293
5.3.4  Courant Algebroids .................................................. 297
5.3.5  Generalized Complex Geometry .................................... 303
5.3.6  T-Duality in Generalized Geometry ............................... 307

6  Stochastic Geometry and Quantum Gravity: Some Rigorous Results . 313
H. Zessin
6.1  An Axiomatic Introduction into Regge’s Model ..................... 314
6.2  The Zero-Infinity Law of Stochastic Geometry and the Cluster Process 316
6.2.1  Basic Concepts ....................................................... 316
6.2.2  Cluster Properties and the Zero-Infinity Law of Stochastic Geometry ........................................... 317
6.2.3  Cluster Properties and the Zero-Infinity Law for Marked Configurations .................................................. 319
6.2.4  The Cluster Process ............................................... 320
6.2.5  The Poisson Process $P_\rho$ ........................................ 322
6.3  Poisson–Delaunay Surfaces with Intrinsic Random Metric ........ 323
6.3.1  The Delaunay Cluster Property .................................. 323
Contents

6.3.2 Poisson–Delaunay Surfaces ........................................ 326
6.3.3 Scholion: The Voronoi Cluster Property .................... 327
6.4 Ergodic Behaviour of PD-Surfaces ................................. 328
   6.4.1 Palm Measures and Palm Distributions .................. 328
   6.4.2 An Ergodic Theorem for Intrinsic Metric Quantities of Stationary Random Surfaces .......................... 329
   6.4.3 Curvature Properties of the Poisson–Delaunay Surface .... 331
6.5 The Two-Dimensional Regge Model of Pure Quantum Gravity ... 333
6.6 Comments and Final Dreams ........................................ 334
References ................................................................. 335

Part III  Afterthoughts

7 Steps Towards Quantum Gravity and the Practice of Science: Will the Merger of Mathematics and Physics Work? ................ 339
   B. Booß-Bavnbek
   7.1 Regarding the Need and the Chances of Unification .............. 339
   7.2 The Place of Physics in John Dee’s Groundplat of Sciences and Artes, Mathematicall of 1570 .............................. 340
   7.3 Delimitation Between Mathematics and Physics .................. 341
   7.4 Variety of Modelling Purposes .................................... 342
      7.4.1 Production of Data, Model-Based Measurements .......... 342
      7.4.2 Simulation ............................................. 343
      7.4.3 Prediction ............................................. 343
      7.4.4 Control .............................................. 344
      7.4.5 Explain Phenomena ..................................... 345
      7.4.6 Theory Development .................................... 346
   7.5 “The Trouble with Physics” ..................................... 347
   7.6 Theory–Model–Experiment ....................................... 347
      7.6.1 First Principles ........................................ 348
      7.6.2 Towards a Taxonomy of Models .......................... 348
      7.6.3 The Scientific Status of Quantum Gravity as Compared to Medicine and Economics ......................... 350
   7.7 General Trends of Mathematization and Modelling ............... 351
      7.7.1 Deep Divide .......................................... 351
      7.7.2 Charles Sanders Peirce’s Semiotic View ................ 351
