ABOUT THE AUTHOR

ROD STEPHENS started out as a mathematician, but while studying at MIT, he discovered how much fun programming is and he’s been programming professionally ever since. During his career, he has worked on an eclectic assortment of applications in such fields as telephone switching, billing, repair dispatching, tax processing, wastewater treatment, concert ticket sales, cartography, and training for professional football players.

Rod has been a Microsoft Visual Basic Most Valuable Professional (MVP) for more than a decade and has taught introductory programming courses. He has written more than two dozen books that have been translated into languages from all over the world, and he’s written more than 250 magazine articles covering Visual Basic, C#, Visual Basic for Applications, Delphi, and Java.

Rod’s popular VB Helper website (www.vb-helper.com) receives several million hits per month and contains thousands of pages of tips, tricks, and example programs for Visual Basic programmers. His C# Helper website (www.csharphelper.com) contains similar material for C# programmers.

You can contact Rod at RodStephens@CSharpHelper.com or RodStephens@vb-helper.com.

ABOUT THE TECHNICAL EDITOR

BRIAN HOCHGURTEL has been doing .NET development for over ten years, and actually started his .NET experience with Rod Stephens when they wrote the Wiley book, *Visual Basic.NET and XML*, in 2002. Currently Brian works with C#, SQL Server, and SharePoint in Fort Collins, CO.
THANKS TO BOB ELLIOTT, Adaobi Obi Tulton, San Dee Phillips, Katie Wisor, and all the others who worked so hard to make this book possible. (Adaobi was this book’s project manager. You’ll learn what a project manager does in Chapter 3. It’s a bit different for writing a book but not as different as you might think. As always, many thanks for your hard work, Adaobi!)

Thanks also to technical editor Brian Hochgurtel for giving me the benefit of his valuable experience.

Special thanks to Mary Brodie at gearmark.blogs.com for letting me use her quote in Chapter 13, “Iterative Models.”
# CONTENTS

## INTRODUCTION xxvi

## PART I: SOFTWARE ENGINEERING STEP-BY-STEP

### CHAPTER 1: SOFTWARE ENGINEERING FROM 20,000 FEET 3

- Requirements Gathering 4
- High-Level Design 5
- Low-Level Design 6
- Development 6
- Testing 6
- Deployment 8
- Maintenance 9
- Wrap-up 9
- Everything All at Once 10
- Summary 11

### CHAPTER 2: BEFORE THE BEGINNING 15

- Document Management 16
- Historical Documents 18
- E-mail 19
- Code 21
- Code Documentation 22
- Application Documentation 25
- Summary 25

### CHAPTER 3: PROJECT MANAGEMENT 29

- Executive Support 30
- Project Management 31
  - PERT Charts 33
  - Critical Path Methods 38
  - Gantt Charts 41
  - Scheduling Software 42
  - Predicting Times 42
    - Get Experience 44
    - Break Unknown Tasks into Simpler Pieces 44
